

Clean your hands. Save a life.

Why is it so important to keep your hands clean?

Every year hundreds of millions of people around the world contract a Healthcare Associated Infection (HCAI). Thousands of them die as a result.

Hands are the main transmitters of these kinds of infections but the vast majority are preventable through good hand hygiene.

Washing your hands well is therefore a simple but vitally important measure that you can take to keep both yourself and your patients safe.

When you should clean your hands

There are 5 regular occurrences when you should stop and wash your hands:

1

Before contact with a patient

2

Before aseptic tasks

3

After exposure to body fluids

4

After contact a with patient

5

After contact with patient's surroundings

Hygenex are redefining infection control. If you need any help with your sluice room requirements, get in touch today.
